

# Pettit Did it!

Made Water-based Technology Awesome!

## Neptune5

New technology creates a super-strong hybrid paint without building up over time. Its durable crossbreed finish is like a hard paint, yet self-polishes over time like a seasonal ablative. Soap and water cleanup leaves no solvent smell, there is no sanding between coats and with low VOC.

## Hydrocoat®

Largest selling water-based antifouling for over 20 years. Excellent multi-season protection against all types of fouling. Innovative technology uses water in place of harsh solvents found in most bottom paints resulting in an easier application and clean up. No heavy solvent smell. The ablative surface wears away with use, exposing fresh biocide while eliminating paint build-up and the need for sanding.

## Hydrocoat® ECO

Hydrocoat Eco utilizes the highest level of new metal-free Ecomea biocide available combined with a slime fighting inhibitor for unprecedented multi-season protection. This copper-free formula is compatible over almost all bottom paints and is safe for use on all substrates including steel and aluminum.

## Hydrocoat® SR

World's first dual-biocide, water-based, ablative bottom paint, providing outstanding multi-season protection. Hydrocoat SR uses an organic algacide offering outstanding protection against hard and soft fouling and a greener earth.

## H2-Prime

A low VOC, two-part water-based epoxy, non-sanding primer designed for use as an adhesion promoter with Hydrocoat, Hydrocoat SR, Hydrocoat Eco and Neptune 5. When used with Bio-Blue Surface Prep 92, this non-sanding system is VOC compliant in all areas.

## Bio-Blue Hull Surface Prep 92

De-waxes, cleans, and prepares bare fiberglass for painting. Easily removes unwanted contaminants and mold release agents prior to painting. When used with 6998 Skip Sand and anti-fouling paint, it is part of an easy 1-2-3 system.

## SeaGold

The beauty and durability of varnish, the ease of use of synthetic wood treatments, low-odor, user-friendly and VOC compliant. UV stable resins provide a long lasting finish that will not turn color with exposure to the elements. Fast-drying formula allows 3 to 4 coats in a day. SeaGold can be applied over existing varnishes. Its translucent amber color does not hide or blur the wood grain.

**Someone had to do it.**

Someone had to take it upon themselves to really understand what boat yards need, to put time, effort and resources into changing old mind-sets and preferences, to introduce revolutionary, new technologies that create products that are substantially more effective and easier to use than the old "go-to" systems and products.

**Breakthrough, solvent-free, systems that benefit boat yard, boat owner and planet.**

Pettit's new systems severely limit VOC and harmful chemical release into air and water. All products comply with EPA and local regulations and clean-up with a little soap and water. All are break-through, game-changing, work-saving, money-sparing products you'll find only under the Pettit brand.

**Better than the best solvent-based products.**

Yet for all their clean and green, these water-based Pettit systems are measurably more effective than even the most premium, solvent-based products and will exceed your customer's expectations, while increasing yard productivity and profitability. And that's a Pettit revolution you can take to the bank.
